

# Automation Specialist

We are looking for an automation specialist to create and automate reporting processes for the organization

Duties and responsibilities:

- Work with function and process owners to identify and assess appropriate automation use cases.
- Lead Automation workshops to understand end to end process while identifying automation risks, assumptions, and dependencies associated with process automation.
- Develop scalable and efficient process automations and reusable components that can be leveraged across different functions in the businesses.
- Use of industry leading Automation tools whilst supporting and implementing solutions as part of an Agile team.
- Serve as subject matter expert to others seeking to utilize Automation technologies for automating and streamlining existing manual business processes.
- Translate business requirements, current and future state process designs to create automation ready process flows.
- Support end-to-end execution of multiple Automation projects, varying in size and complexity.
- Work closely with business operational partners and vendors ensuring alignment to timelines and delivery of automations.
- Collaborate with multi-functional and virtual teams across IT, business operational functions, and vendors.
- Adhere to the appropriate governance standards, policies, and best practices

Requirements & Skills

- Embodies the AB InBev culture and 10 principles
